Albin Abraham

London, UK | albinabraham1996@gmail.com | +44 7767931572 | linkedin.com/in/albin-abraham-ab07b6177

Professional Summary

Analytical and versatile software developer with strong programming skills in Python, Java, JavaScript, and C/C++. MSc Data Science and Analytics candidate with experience in backend development, API integration, and data-driven decision-making. Skilled in problem-solving, data analysis, and delivering high-quality solutions under pressure. Passionate about applying technical expertise to front office systems, trading platforms, and financial analytics.

Education

MSc Data Science and Analytics – University of Hertfordshire, UK
Sep 2022 – Sep 2024
BTech Computer Science – METS School of Engineering, India
2015 – 2019

Technical Skills

- **Programming & Development:** Python, Java, JavaScript, C, C++, Node.js, HTML/CSS
- **Backend & APIs:** RESTful APIs, backend development, server-side logic
- **Data & BI Tools:** SQL, Excel, Power BI, Tableau, Matplotlib, Seaborn
- **Analytical & Problem-Solving:** Trend analysis, KPI optimization, root cause investigation
- **Other:** Version control (Git), Agile methodologies, documentation, testing best practices

---

Relevant Projects

Real-Time Multiplayer Dice Game – Full-stack Development
- Developed using Node.js, JavaScript, HTML/CSS, and Socket.IO with real-time score synchronization and backend logic.
- Demonstrated ability to design, implement, and maintain scalable backend services.

Machine Learning for IPL Fantasy Predictions – Data Science & Analytics
- Built predictive models using Python to generate Dream11 fantasy teams from player statistics.
- Applied statistical and mathematical methods to solve complex analytical problems.

Delivery & Education Applications (Android)
- Developed BTech project and training app, including backend logic, database handling, and user interface development.
- Enhanced user experience and integrated data-driven features for decision-making.

Trading & Finance Simulation (Self-Learning Project)
- Built Python-based derivative pricing and PnL calculation tools to understand front office workflows.
- Explored risk and portfolio analysis concepts to align with commodity trading environments.

Professional Experience

Coding Coach / Tutor – Jam Coding, Get Further, Oxford Summer Camp, UK
Feb 2024 – Aug 2025
- Taught programming (Python, Scratch, web basics) and mathematics to students aged 9–18.

- Simplified complex concepts and developed problem-solving skills using data storytelling techniques.

Software Engineer – UST & Quest Global, India

Dec 2021 – Sep 2022

- -p;/

Analyst – Geosem Microsystems & EZIT Connect, Bengaluru, India

Dec 2020 – Oct 2021

- Supported data management, Salesforce administration, and report/dashboard creation.
- Worked closely with cross-functional teams to optimize processes and support business decisions.

Customer Service Associate – Amazon, Coimbatore, India

Jul 2019 – Dec 2020

- Resolved customer queries while analyzing processes for efficiency improvements.

Key Strengths & Achievements

- Strong analytical and problem-solving skills with high attention to detail
- Experience in fast-paced environments requiring agility and accuracy
- Ability to translate technical concepts for non-technical stakeholders
- Quick learner with adaptability to new technologies, frameworks, and domains

---

Additional Highlights

- Hands-on experience with backend services, APIs, and database management
- Developed projects demonstrating full-stack capabilities and analytical rigor
- Exposure to derivative pricing and risk analysis concepts through self-initiated learning
